SANITIZED AG launches a new biocide-free product for durable, odor-free textiles, ideal for all application processes

Burgdorf/CH, 3 May 2022: SANITIZED AG, the specialist for hygiene function in textiles, is expanding its Sanitized® Odorex™ portfolio for odor-neutralizing technologies. The new OX20 product is usable on cotton, viscose, or synthetic fibers. It does not contain any biocides, it is highly wash-resistant, and it can be combined well with other effects.

Early on, SANITIZED identified the market need for textiles with an odor-neutralizing effect. Sanitized® Odorex™ is the product of several years of experience with environmentally friendly textile treatments. SANITIZED focuses heavily on the causes of, the production of, and the fighting of unpleasant sweat odor in textiles. The basis for the newly introduced biocide-free OX20 product is a metal-free polymer that neutralizes odors. It meets market requirements regarding wash-resistance with excellent results after up to 50 household washes. “We are convinced that biocide-free solutions that fight sweat odor are on their way to becoming the new market standard. And this fact mainly applies to outdoor, sports, and workwear,” remarks Urs Zihlmann, Product Manager of Textile Additives at SANITIZED AG.

Versatile and highly cost-efficient

The new product can be applied in extraction, pad, and spray. It can be used on all common substrates and is compatible with other textile effects. These properties increase the flexibility and efficiency during product design, and they reduce production costs. As the first such technology worldwide, OX20 can be applied to synthetics in the dye bath.

Feel and wearing comfort

Binders and particle systems negatively affect the textile's feel and moisture management. OX20 is a particle-free product with a long-lasting effect that does not change how the textile feels, nor does it affect the textile's moisture management.

“Sanitized® Odorex™ is the technology of the future that makes odor-free textile products a reality. It meets industry standards as well as consumer standards regarding durability and sustainability,” explains Zihlmann. “Since it is a biocide-free system, OX20 is not subject to any regulatory restrictions. The textile industry greatly appreciates this property,” he adds.

Adding value
since 1935

Sanitized® adding value since 1935

Sanitized® enhances textiles, polymer products as well as paints and coatings. The company develops its innovative technologies in Switzerland and markets them worldwide. The Sanitized® additives ensure odor-free textiles, the responsible protection of paints and treat polymers permanently with a hygiene function and material protection.

The all-embracing service for customers is unique: Standardized tests in the TecCenter, technical and regulatory advice, marketing support. Manufacturers and consumers have relied on the globally trusted Sanitized® brand for decades. It enables differentiation in the market and creates tangible added value for customers.
